

## DATA ANALYTICS

Used correctly, analytics can turn your agency's IT operations data into valuable, actionable insight. However, only 20 percent of respondents in a Data Analytics survey reported that they have the time to deploy analytic solutions across their enterprise. Many feel that operationalizing analytics within their enterprise would be too complex; beyond their current capabilities and reach. At IntelliDyne, we've developed a proven, streamlined, agile approach to data analytics that provides results almost immediately.

Most decision makers have learned that the smartest business decisions are empirically based on fact, not instinct, or gut-feel. In today's data-rich environments, this means analysis must go beyond historical, transaction-based reporting methods and fuse disparate data coming from sensors, log files, and GPS. IntelliDyne's proven experience delivers results; Our Enterprise Infrastructure Management (EIM) analytics tool provides clients with a transparent view into the operational performance of their Enterprise IT infrastructure and support team and provides critical insights leading to improved service reliability and availability. Our CFO's Financial Audit Readiness toolkit aggregates multiple general ledgers into a consolidated view to support enterprise-wide reconciliations, quantitative analysis, and audit readiness and response activities.

When change is the only constant, IntelliDyne delivers results to our clients with agility and expertise that are second to none. Our DNA is made up of a unique blend of attributes, creating a full client experience with predictable outcomes. Every time.

### Capabilities:

- ▶ Data Quality Assessment & Enrichment
- ▶ Predictive Analytics & Modeling
- ▶ Operationalized Analytic Solutions
- ▶ Agile-Analytics' Methodology
- ▶ EIM Data Analytics
- ▶ CFO Audit Readiness Analytics
