

# Processes You Can Automate with RPA

## IN YOUR AGENCY

### HIGH REPETITION OR VOLUME

Low-order activities can be automated. A key benefit of RPA is the reduction of highly repetitive human effort. You should consider automating your highest volume processes first.

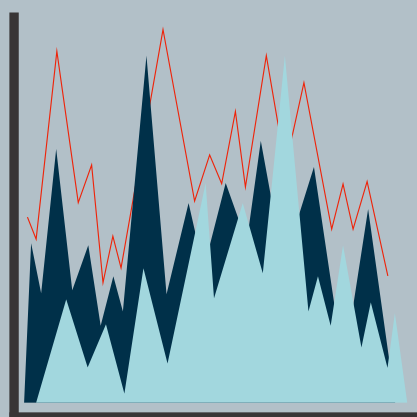

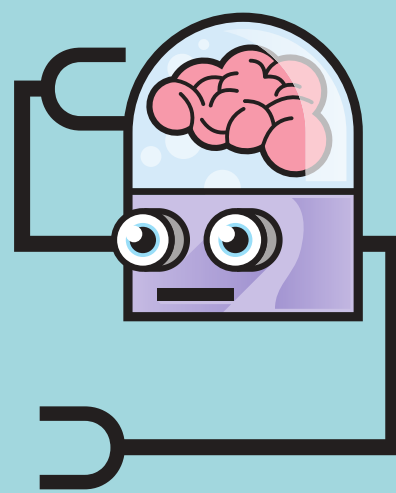

### TIME SENSITIVITY

Procedural backlogs that delay the delivery of services to end users or delay the notification of risk events are great candidates for automation.

### ERROR-PRONE PROCESSES

Multi-step manual processes that are, by nature, more prone to human error, scenarios with high-volume, and processes with low tolerance for error.

### LABOR ELASTICITY

Processes that have wide demand variation force organizations to either over- or under-hire. RPA allows you to scale up or down, regardless of peak demand or timing.

RPA ENABLES YOU TO  
AUTOMATE JUST ABOUT  
ANY BUSINESS PROCESS
