

CORPORATE OVERVIEW

Founded in 2024, MakaiDyne LLC is a SBA-approved Mentor-Protégé Joint Venture (MPJV) that brings together **Makai** – a Small Business Administration (SBA)-certified NHO 8(a) small, disadvantaged Business (SDB), and **IntelliDyne** – a market-leading IT services firm that has been delivering information technology consulting services and solutions to Government and Commercial clients on matters of national, state, and local importance for 25 years. Makai is majority owned by the Kekoa Foundation, a non-profit Native Hawaiian Organization (NHO), and focuses on providing exceptional services to Department of Defense (DoD) customers and industry partners while supporting its Native Hawaiian Community.

Our MPJV structure offers the stability of a large organization through a centralized, shared services back office. With over 40 years of combined experience, we support our Defense customers through a wide range of cybersecurity services, including risk management, compliance, incident response, cyber intelligence, and network modernization. Leveraging the know-how and successful track record of our management team with the combined strength of Makai and IntelliDyne's capabilities, MakaiDyne offers small business agility backed by large business reliability.

We strive to be a role model in business and community; do the right things for our customers and employees; create lasting customer relationships as a trusted partner, not just a vendor; and attract and retain a first-class diverse workforce.

As an NHO, Team MakaiDyne can receive set-aside sole source awards up to \$100 million without additional justification and approval, using a simplified acquisition process:

1. **Decision is reached by Contracting Officer (KO) to sole source to MakaiDyne**
2. **KO issues an Intent to Award letter with project description and sends to MakaiDyne SBA Representative**
3. **SBA reviews project, determines that MakaiDyne is capable of successfully performing the project**
4. **SBA issues letter of acceptance to the KO**
5. **KO informs MakaiDyne, we begin negotiations**
6. **Once mutually acceptable terms are negotiated the contract is awarded.**

CYBERSECURITY

From assessment through design and full deployment, MakaiDyne delivers end-to-end secure content management, encryption, network engineering and management, authentication, intrusion detection, automated monitoring, rapid response and forensics. We provide network modernization and RMF compliance expertise to our Defense customers.

AI/ML

At MakaiDyne, we've formulated a new approach using Augmented Analytics to help decision-makers and analysts understand the "why" behind the data—applying filters to dig deeper, identify relevant events, and ultimately prescribe the next best actions. Through the integration of powerful BI, AI, ML and RPA technologies, our Augmented Analytics methodology takes traditional BI dashboards to the next level, improving the speed and quality of decision making, and even automating the required next steps. It shifts valuable resources from finding the what to learning the why.

INTEGRATION SERVICES & EDGE TECHNOLOGIES

We built and are responsible for managing and modernizing infrastructure for Defense customers, supporting multiple enterprise-level health IT initiatives. The environment is integrated with all primary branches of the military and the customer computing network, facilitating access to multiple health IT applications. MakaiDyne is constantly innovating and improving process and system efficiencies. We develop relevant prototypes, perform tests in our private labs, and implement cutting edge technologies in a controlled manner. Other ways we enhance the SDLC include automating repetitive tasks, such as code generation, testing, and bug detection, which reduces development time and enhances code quality.
